[PDF] Electromyography In Clinical Practice: Electrodiagnostic Aspects Of Neuromuscular Disease

A concise and practical guide to the electrodiagnostic procedures in current use for the investigation of patients with neuromuscular disease. Covers basic and clinical aspects of these diseases and related electrodiagnostic techniques, with special sections focusing on nerves in the upper limbs, cranial nerves, and the central nervous system.

Electrodiagnostic testing - Nerve conduction studies (NCS) and electromyography (EMG) are useful to support the diagnosis of CTS and to rule out other abnormalities. The electrodiagnosis of CTS rests upon the demonstration of impaired median nerve conduction across the carpal tunnel in the context of normal conduction elsewhere.

Relevance to Clinical Practice. A. Natural history of peripheral nerve injury. In neurapraxia, diminished muscle strength and/or sensation develop acutely, but because of axon continuity, nerve conduction of the distal segment remains intact regardless of the length of time following injury.

Myasthenia gravis (MG) is a relatively rare autoimmune disorder in which antibodies form against acetylcholine nicotinic postsynaptic receptors at the neuromuscular junction of skeletal muscles (see the image below). MG is sometimes identified as having an ocular and generalized form, although one is not exclusive of the other and the ocular...

The AANEM (2006) states that "the standard of care in clinical practice dictates that using a predetermined or standardized battery of NCSs for all patients is inappropriate". "It is the position of the AANEM that, except in unique situations, NCSs and needle EMG should be performed together in a study design determined by a trained...

In neuroscience, an F wave is one of several motor responses which may follow the direct motor response (M) evoked by electrical stimulation of peripheral motor or mixed (sensory and motor) nerves. F-waves are the second of two late voltage changes observed after stimulation is applied to the skin surface above the distal region of a nerve, in addition to the H-reflex (Hoffman's Reflex) which...

Neurology (from Greek: νεῦρον (neûron), "string, nerve" and the suffix -logia, "study of") is a branch of medicine dealing with disorders of the nervous system. Neurology deals with the diagnosis and treatment of all categories of conditions and disease involving the central and peripheral nervous systems (and their subdivisions, the autonomic and somatic nervous systems), including...

The author noted that electrodiagnostic testing may be a useful clinical tool to evaluate the progress of chiropractic patients with lumbar disc herniation and radicular pain syndromes. This was a single case study and findings were confounded by combinational use of spinal manipulation and Pettibon wobble chair.

Electrodiagnostic studies such as repetitive nerve stimulation (RNS), electromyography (EMG), and nerve conduction studies (NCSs) can help elucidate the etiology of muscle weakness. RNS involves electrically stimulating a motor nerve at either low (2–3 Hz or possibly 5 Hz) or high frequency (30–50 Hz) and recording the response in the ...
